

## **Dental Video Script ENG**

When it comes to taking charge of your dental health, you're in the driver's seat. Start by understanding your dental coverage. There are two kinds of dental care, preventive care like x-rays exams and routine cleanings, or procedures like fillings root canals and crowns and bridges.

Different SCAN plans include different levels of care. Some plans give you the option to add additional dental coverage with a plan from Delta Dental. With any dental coverage, you'll choose a dentist from the Delta USA Network, or let Delta Dental choose for you, and you can change at any time.

With any new dentist, schedule a checkup to meet your dental team and decide if they're the right fit. Need a ride to your dentist office, use your SCAN transportation benefit. At your appointment you can expect to fill out paperwork, have an exam, and discuss any problems. You may or may not have a cleaning. Ask your dentist for a treatment plan.

And remember that when it comes to your health, it's your call. Ask questions to learn more about health benefits and costs. And contact Delta Dental with any questions about your coverage. Getting on the road to good dental care has never been easier with SCAN and Delta Dental.
