

Vision Video Script ENG

Are you seeing changes in your vision? See clearly with your SCAN vision benefit. Routine vision care is separate from your medical coverage. When it's time to have your vision checked, there's no referral needed. SCAN works with EyeMed for your vision care benefit, so you can see any vision provider that's part of the EyeMed select network.

Your vision benefit includes a vision exam every year to spot any changes. What's more, your SCAN plan also includes a vision allowance. Put it toward any combination of prescription lenses, frames, or contacts. Use your vision allowance at your EyeMed vision provider's office. Or if you like the options available at another EyeMed location, just take your prescription and order your eyewear there.

Keep in mind, some eye problems, like cataracts, or macular degeneration, need medical care. For this, you'll see your SCAN primary care doctor. Your doctor can refer you to the right specialist for care, treatment, and related materials.

Need a ride to your appointment? Call SCAN transportation to get you there. When it comes to your vision, we hope we've made it clear. Take advantage of your SCAN vision benefits.
